

Snowcone[®] Snowbell

Styrax japonicus 'JFS-D'

Snowcone[®] features the same pure white, bell-shaped, pendulous flowers as the species, but is unique for its densely uniform and pyramidal shape. Its shape resembles the inverted icy snow cone treat that inspired its name. Planted in rows, groves or in large, landscape-size containers, it lends a formal air to landscapes.

Snowcone[®] flowers heavily at an earlier age than seedling-grown trees, and is also resistant to the winter twig dieback problems that are often seen in trees of the species.
