

MOUNTAIN SENTINEL® ASPEN

Mountain Sentinel® Aspen

(*Populus tremuloides* 'JFS-Column')

brings columnar form to our native aspen. Ascending branches form an extremely narrow and upright tree of about 35' height and 8' spread at maturity. Its excellent performance in our mild, maritime USDA Zone 8 climate and hardiness through Zone 3 assures its adaptability over a wide planting range.

This leafy landscape exclamation mark features the same golden yellow fall color and magically unique sound of fluttering leaves that make quaking aspens such popular landscape trees. It is eye-catching even in winter, when its silvery-gray bark glows in stark contrast to a backdrop of dark evergreens or grey winter skies.
